DETAILED ACTION

Response to Amendment

The declarations under 37 CFR 1.132 filed December 20, 2004 is sufficient to overcome the rejection of claims 1-60.

Allowable Subject Matter

Claims 1-60 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for preventing playback of unauthorized copies of encrypted content stored on a read-only media. Each independent claim prevents the unauthorized playback of encrypted content by deriving the keying material from validation data obtained from a validation region within the medium. The closest prior art, "Content Protection for Recordable Media Specification" and "Content Protection for Prerecorded Media Specification", fails to anticipate or render obvious the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

A. Itami et al. (5,418,852) discloses a method for preventing unauthorized use of a recording medium by comparing information stored in a user accessible area to information stored in a user inaccessible area. The invention does not use the user inaccessible information to generate a decryption key for decrypting the encrypted content data.

B. Ishiguro et al. (5,883,958) discloses a video disk playback apparatus in which a disk driver produces an encryption key to encrypt the video data received from the disk and a decoder board is used to decrypt the encrypted video data. The invention does not use information from the disk to generate a decryption key for decrypting the encrypted content data.

C. Bae (US 2003/0145181) discloses a method for ensuring an optical disk is not an unauthorized duplicate but rather an original disk by comparing stored authentication data to stored intentional error data. The invention does not use stored data to generate a decryption key for decrypting the encrypted content data.
